

Data Structures Mini Project:

STUDENT RECORD
MANAGEMENT SYSTEM

- General Details

USN	Class	Name	Mobile	Email

Introduction

Using the basic concepts of Data Structures, we are developing “Student Record Management System”.

Need of Work/Reason for Selection of this Project

- School/College has to maintain the list and details of its students
- It gets hectic to track, search and create the Student Record manually
- So we are developing this project of Student Record Management
- This project will help the school and colleges to keep record of their students

OBJECTIVE

The main objective of the Student Record Management System is to manage the details of Students. The project manages the information about Students – Name, Roll Number, Courses enrolled, CGPA. These data can be created, and can also be used to search for a particular student details using their Roll number.

PROBLEM STATEMENT

Program to build a simple Software for Student Record Management System which can perform the following operations:-

- Store the First name of the student.

- Store the Last name of the student.

- tore the unique Roll number of every student.

- Store the CGPA of every student.

- Store the courses registered by the student.

BENEFITS TO THE SURROUNDING SOCIETY

Education is a very important aspect for a civilized society. Thus, Schools and Colleges have a prominent role. By implementing this, schools and colleges' can increase their productivity. It benefits the students as well.

EQUIPMENTS AND FACILITIES REQUIRED

The code is written in C language and compiled using CodeBlocks IDE. It is the only requirement. The program runs in any low-end computer.

PROPOSED TECHNIQUE or METHODOLOGY

The idea is to form an individual functions for every operation. All the functions are unified together to form software.

- Add Student Details: Get data from user and add a student to the list of students. While adding the students into the list, check for the uniqueness of the roll number.
- Find the student by the given roll number: This function is to find the student record for the given roll number and print the details.
- Find the student by the given first name: This function is to find all the students with the given first name and print their details.
- Find the students registered in a course: This function is to find all the students who have registered for a given course.

- Count of Students: This function is to print the total number of students in the system
- Delete a student: This function is to delete the student record for the given roll number.
- Update Student: This function is to update the student records. This function does not ask for new details for all fields but the user should be able to pick and choose what he wants to update.

ADVANTAGES

- Students Records can be created
- Helpful for Colleges and Schools to keep a log of their students
- Students Marks can be stored. It can be useful to track their performance.
- Unique Roll Number can be assigned to each student.
- Individual Students can be searched using their Roll Number, or Name.
- Any field of Student Data can be updated or modified.

LIMITATIONS

- . Since the project is computer-based, a computer infrastructure is required. Schools with very low funding cannot afford it.
- . Only the specified fields are available to store data. The user cannot add a separate field.

OUTPUT

```
"G:\_Programming\CodeBlocks Projects\Student Record Management\bin\Debug\Student Record Management.exe"
Enter the First Name of the student
Ashok
The Students Details are
The First name is Ashok
The Last name is Ammangi
The Roll Number is 6
The CGPA is 9.200000
The course ID of each course
The course ID are 30
The course ID are 31
The course ID are 32
The course ID are 33
The course ID are 34

Enter your choice: 4
Enter the course ID
30
The Students Details are
The First name is Ashok
The Last name is Ammangi
The Roll Number is 6
The CGPA is 9.200000

Enter your choice: 5
The total number of Student is 1

you can have a max of 50 students
you can have 49 more students

Enter your choice: 7
Enter the roll number to update the entry : 006

Enter your choice: 6
Enter the Roll Number which you want to delete
006
The Roll Number is removed Successfully

Enter your choice: 1
Add the Students Details
-----
Enter the first name of student
Avinash
Enter the last name of student
K
```

```
"G:\_Programming\CodeBlocks Projects\Student Record Management\bin\Debug\Student Record Management.exe"
Enter the last name of student
K
Enter the Roll Number
007
Enter the CGPA you obtained
9.3
Enter the course ID of each course:
30
31
32
33
34

Enter your choice: 8

Process returned 0 (0x0)   execution time : 372.436 s
Press any key to continue.
```
